Chemicals

Proper chemical balance is important for healthy water. We'll test alkaline properties, phosphates, chlorine pH, and CYA.

Equipment Inspection

The Arizona sun is hard on pool equipment. From rubber seals to plastic parts, equipment fails can happen quickly in the desert.

Pool Photo

A photo of your serviced pool will be emailed to you each week after your service stop.

Connect

Communication is important to us, so we offer several ways you can reach out with questions or concerns. Call our office number, text, or click to message us on Facebook.

MAINTENANCE & REPAIRS

Regular equipment maintenance is imperative for a properly working system. A system in great condition works for your pool to keep water healthy all year.

- New/Clean Sand
- New/Clean Grids
- New/Clean Cartridges

FILTERS

Proper Filtration Is Key To A Happy Pool.

- Energy Savings
- Cost Savings
- Improved Cleaning
- Built-in Computer

EQUIPMENT UPGRADES

Save Money With A New Variable Speed Pump (VSP)

- Mobile Control

Green to Clean

Drain & Clean

To maintain healthy water, Heath Family Pools recommends draining and changing your pool's water every 2-3 years. Green pools are sometimes easy fixes with a balance of chemicals while others need a drain and a good bath before adding new water and start up chemicals.

Porta-Filter Clean

An alternative to draining is filter cleaning. We will determine if your pool can safely be Porta-Filter cleaned based on the condition of the pool and the time of year. Some pool cannot be safely drained in the heat of the Arizona summers making the Heath Family Pools Porta-Filter Cleaning a great option. Reach out and let us know about your green pool.
